global deforestation provides a concise but comprehensive examination of the variety of ways in which deforestation modifies environmental processes as well as the societal implications of these changes the book stresses how forest ecosystems may be

prone to nearly irreversible degradation to prevent the loss of important biophysical and socioeconomic functions forests need to be adequately managed and protected against the increasing demand for agricultural land and forest resources the book describes the spatial extent of forests and provides an understanding of the past and present drivers of deforestation it presents a theoretical background to understand the impacts of deforestation on biodiversity hydrological functioning biogeochemical cycling and climate it bridges the physical and biological sciences with the social sciences by examining economic impacts and socioeconomic drivers of deforestation this book will appeal to advanced students researchers and policymakers in environmental science ecology forestry hydrology plant science ecohydrology and environmental economics

while deforestation continues at an alarming rate around the world discussions on the range of underlying causes continue the premise is that studying successful transitions from deforestation to sustainable forestry ex post in finland can provide novel insights into how deforestation in the tropics might be reduced in the future our fundamental question here is why finland succeeded to stop deforestation for a century ago and why not the same is feasible in the contemporary tropical countries this book presents a novel integrated theory within which this case study on finland and contemporary modeling of underlying causes of tropical deforestation are developed finland remains the world s second largest net exporter of forest products while maintaining the highest forest cover in europe a transition from deforestation to sustainable industrial forestry took place in finland during the first part of the 20th century the underlying causes of this transition are compared via our theory with deforestation in 74 contemporary tropical countries both appear similar and support our theory the interaction of public policies and market institutions has appeared to be critical during this transition the study s findings suggest that private forest ownership with a continuous increase in the real value of forests and alleviation of poverty under non corruptive conditions has been a necessary but not a sufficient condition for this transition in a parallel way public policies have also proved to be a necessary but not sufficient condition in this transition the conclusion is that socialistic forestry along with corruption is artificially maintaining too low values in the tropical forests the opportunity cost of sustainable forestry remains too high and deforestation by extensification of agriculture therefore continues the prevailing socialistic forestry with dominating public forest ownership is by purpose maintaining administratively set low stumpage prices leading to low value of forests wide corruption and continuous

the congo basin comprises cameroon central african republic the democratic republic of congo the republic of congo equatorial guinea and gabon it covers close to 70 of the forestlands of africa of the 530 million hectares in the congo basin 300 million are composed of forests 99 of these are primary or naturally regenerated forests as opposed to plantations

tropical forests are an undervalued asset in meeting the greatest global challenges of our time averting climate change and promoting development despite their importance tropical forests and their ecosystems are being destroyed at a high and even increasing rate in most forest rich countries the good news is that the science economics and politics are aligned to support a major international effort over the next five years to reverse tropical deforestation why forests why now synthesizes the latest evidence on the importance of tropical forests in a way that is accessible to anyone interested in climate change and development and to readers already familiar with the problem of deforestation it makes the case to decisionmakers in rich countries that rewarding developing countries for protecting their forests is urgent affordable and achievable

deforestation and climate change provides a comprehensive overview of the state of play in international regimes programs and proposals for reducing emissions from deforestation and forest degradation the book brings together a collection of papers canvassing some very important topics cleverly crafted by the editors to flow rationally from general observations to quite technical evaluation of methods and approaches it caters for a range of audiences who may have a little knowledge of climate change policy development matt mcintyre australian journal of environmental management

since 1978 when the world bank published its policy paper on forestry the world s understanding of and concern about the forest sector of the developing world has increased substantially it has become clear that forests and woodlands play an even

more important economic and ecological role than had earlier been recognized in particular the importance of tropical moist forests in protecting biological diversity has become more fully appreciated as has their role in the carbon cycle and in global climatic change the nature of the challenge deforestation and forest degradation the growing demand for forests and trees for basic needs strategies for forest development the role of the world bank challenges for the forest sector strategies for forest development the role of the world bank

the world's forests are disappearing at an alarming rate and with disastrous consequences demand for wood and paper products ranks high amongst the causes of deforestation and forest degradation and is now the major cause of loss in those forests richest in wildlife there is a great deal to be done to improve the timber industry before our forests are safely and sustainably managed bad harvest presents an incisive account of the role that the timber trade has played in the loss and degradation of forests around the world it examines the environmental consequences of the trade on boreal temperate and tropical regions and its impacts for local people working and living in the forests it also looks at the changing nature of the trade and assesses current national and international initiatives to address the impacts of deforestation finally the authors show how things could be improved in the future by presenting a new strategy for sustainable forest management based on 15 years of extensive research particularly work carried out by the world wide fund for nature bad harvest is essential reading on the subject not only for environmentalists but also for those in the timber trade seeking to improve the management and reputation of their product

a search for new methods for dealing with climate change led to the identification of forest maintenance as a potential policy option that could cost effectively reduce greenhouse gas emissions with the development of measures for reducing emissions from deforestation and forest degradation redd this book explores how an analysis of past forest governance patterns from the global through to the local level can help us to build institutions which more effectively deal with forests within the climate change regime the book assesses the options for reducing emissions from deforestation in developing countries under the international climate regime as well as the incentives flowing from them at the national and sub national level and examines how these policy levers change human behaviour and interface with the drivers and pressures of land use change in tropical forests the book considers the trade offs between certain forestry related policies within the current climate regime and the larger goal

of sustainable forestry based on an assessment of existing multi level institutional forestry arrangements the book questions how policy frameworks can be better designed in order to effectively and equitably govern the challenges of deforestation and land degradation under the global climate change regime this book will be of particular interest to students and scholars of law and environmental studies

this book addresses global and subnational issues concerning the world s forests societies and environment from an independent and non governmental point of view cooperation on a global scale is not only commendable it is essential if solutions to the problems facing the world s forests are to be found to achieve this modern science needs to draw a clearer picture of relationships between forests human activity and the environment and of the consequences of environmental change for the societies development and growth there are several partly intermingled evolutionary forest transitions underway the slow transition from forest area decrease to an increase in the north while deforestation and degradation continues in the south although not all deforestation is considered negative serious social economic and environmental costs may be associated with excessive deforestation deforestation control is just the first step on the stony path towards sustainable forest management the forest management transition refers to the shift in the utilization towards managed semi natural secondary forests and plantation forests there are some signs in the north of the forest paradigm shift from sustainable yield to forest ecosystem concepts how deforestation can be tackled and how these concurrent transitions are effected will have profound implications for the future these processes involve several challenges with south north dimensions a search for an optimum mix of public policies and markets is a global priority both as a forest policy issue and as an inter sectoral item on the political agenda deforestation and transition is discussed here by a team of 14 scientists from both the north and the south this book offers knowledge facts and information about world forests society and environment to help us towards equity in our use of the global forest to create a clearer vision of unasyvla

avoided deforestation can be characterized as the use of financial incentives to reduce rates of deforestation and forest degradation with much of the focus on forests in tropical countries while avoided deforestation as a policy issue is not new the current debate in academic and policy circles on including it in future climate change mitigation strategies such as the clean

development mechanism is gathering pace and this debate is only likely to intensify as negotiations continue over what should be included in the successor agreement to the kyoto protocol which is set to expire in 2012 up until now however the debate in terms of the scientific and economic implications of avoided deforestation has not been brought together this book aims to bring together important research findings in the area along with their policy implications whilst linking avoided deforestation to political economy as well as to the latest developments in environmental and natural resource economics

what do we know about deforestation the direct and underlying causes of deforestation and degradation policy options for reducing deforestation and degradation implications for policies and further research to support redd

deforestation rates in the congo basin are among the lowest in the tropical rainforest belt and are significantly below rates in most other african regions local and regional development population increases and global demand for commodities are likely to increase deforestation and forest degradation in the congo basin

the social dynamics of deforestation and of forest protection are the ongoing interactions amongst social actors and processes that determine the use and management of forests based on a vast amount of research and detailed case studies in brazil central america nepal and tanzania as well as several papers dealing with wider themes and regions this book argues that most current discussions of increased rates of deforestation and perceived accompanying environmental crises are overly simplistic institutional reforms and policy measures that have been undertaken in developing countries usually failed to protect either the forests or people s livelihoods technical solutions to deforestation are only one element in what are essentially political questions the central issue is not how to halt deforestation but rather how to manage forest areas and natural resources in order to meet social goals on a more equitable and sustainable basis conventional wisdom that attributes deforestation primarily to peasant ignorance and population growth is questioned as are other single factor explanations such as market and policy failures

this book is an introductory text which sets world forestry in the context of social environmental historical economic and conservation issues it focuses on the world s forests and how people have related to them and how they have been used since

the time of hunter gatherers until today it looks at the development of forests grassland and humans from the devonian through to the age of agriculture the factors determining the distribution of forests the classification of forest types the value and benefits of the forest the products of the forest and their associated trade it also concentrates on current patterns of deforestation and reforestation sustainable forest management the role of plantations and the current issues in forestry and the future

Text-to-Speech Capabilities

Text-to-speech features can convert written text into audio, providing an alternative way to enjoy books.

Tips for Maximizing Your Ebook Experience

To make the most out of your ebook reading experience, consider these tips.

Choosing the Right Device

Whether it's a tablet, an e-reader, or a smartphone, choose a device that offers a comfortable reading experience for you.

Organizing Your Ebook Library

Use tools and apps to organize your ebook collection, making it easy to find and access your favorite titles.

Syncing Across Devices

Many ebook platforms allow you to sync your library across multiple devices, so you can pick up right where you left off, no matter which device you're using.

Challenges and Limitations

Despite the benefits, free ebook sites come with challenges and limitations.

Quality and Availability of Titles

Not all books are available for free, and sometimes the quality of the digital copy can be poor.

Digital Rights Management (DRM)

DRM can restrict how you use the ebooks you download, limiting sharing and transferring between devices.

Internet Dependency

Accessing and downloading ebooks requires an internet connection, which can be a limitation in areas with poor connectivity.

Future of Free Ebook Sites

The future looks promising for free ebook sites as technology continues to advance.

Technological Advances

Improvements in technology will likely make accessing and reading ebooks even more seamless and enjoyable.

Expanding Access

Efforts to expand internet access globally will help more people benefit from free ebook sites.

Role in Education

As educational resources become more digitized, free ebook sites will play an increasingly vital role in learning.

Conclusion

In summary, free ebook sites offer an incredible opportunity to access a wide range of books without the financial burden. They are invaluable resources for readers of all ages and interests, providing educational materials, entertainment, and accessibility features. So why not explore these sites and discover the wealth of knowledge they offer?
